A Report on “Forest orientation programme”

All Students

Organized By

Science & Humanities Department

Forest orientation programme Report:

Forests are vital to life on Earth. They purify the air we breathe, filter the water we drink, prevent erosion, and act as an important buffer against climate change. Forests offer a home to much of the world's diverse array of plants and animals and provide essential natural resources from timber and food to medicinal plants. Forests also support the lives of local communities and help them to thrive.

In 2020, the tropics lost more than 12 million hectares of tree cover. That's roughly 30 soccer fields' worth of trees every single minute. Illegal logging, poor forest management practices, and growing demand for forest and agricultural products contribute to their rampant destruction. Deforestation is especially severe in some of the world's most biologically diverse regions, such as the Amazon, Borneo and Sumatra, the Congo Basin, and the Russian Far East. As a result, nearly half the world's original forests have been lost.

As per the Guidance from Khalid Siddique Sir (Principal of SVBIT), SVBIT organized Forest orientation programme at SVBIT Campus coordinating with GEER Foundation. Total 90 students were participated. Expert also provide them proper guidance and explain the importance of forest for human beings.
